

How Google searches work

History, Algorithm

Martin Thoma, Benjamin | 24. Januar 2013

FAKULTÄT FÜR INFORMATIK

The screenshot shows an IDE with the following components:

- Package Explorer:** Shows a project structure with packages like `edu.kit.filesystem` and classes like `Computer.java`, `Directory.java`, `File.java`, `HDD.java`, `Node.java`, `NodeContainer.java`, and `ZipArchiv.java`.
- Editor:** Displays the code for `Computer.java`. The code includes a `printContent` method that recursively prints the contents of a `Node` and its children. The `main` method creates a `NodeContainer` and adds several `Node` objects to it.
- Members:** Shows the class members for `Computer`, including `computerName`, `hdds`, `addDrive`, `printContent`, and `main`.

```
32     printContent(f, "-");
33   }
34 }
35
36
37 private void printContent(Node d, String ident) {
38     System.out.println(ident + " " + d.getName());
39
40     ArrayList<Class? extends Node> list = new ArrayList<Class? extends Node>();
41     list.add(Directory.class);
42     list.add(ZipArchiv.class);
43     list.add(File.class);
44
45     if (d instanceof NodeContainer) {
46         NodeContainer e = (NodeContainer) d;
47         for (Class<? extends Node> T : list) {
48             ArrayList<? extends Node> tmp = e.get(T);
49             for (Node n : tmp) {
50                 printContent(n, ident + "-");
51             }
52         }
53     }
```

1 Introduction

2 PageRank

3 End

The early days

In the beginning, there were only web catalogues (maintained by hand)

The early days

Web crawler

The early days

- Humans know what is good for them
 - Humans create Websites
 - Humans will only [link](#) to Websites they like
- ⇒ Hyperlinks are a quality indicator

The early days

- Humans know what is good for them
 - Humans create Websites
 - Humans will only [link](#) to Websites they like
- ⇒ Hyperlinks are a quality indicator

- Humans know what is good for them
- Humans create Websites
- Humans will only [link](#) to Websites they like

⇒ Hyperlinks are a quality indicator

- Humans know what is good for them
 - Humans create Websites
 - Humans will only [link](#) to Websites they like
- ⇒ Hyperlinks are a quality indicator

How could we use that?

- Simply count number of links to a Website
- ✗ 10,000 links from only one page
- Count numbers of Websites that link to a Website
- ✗ Quality of the page matters
- ✗ Total number of links on the source page matters

How could we use that?

- Simply count number of links to a Website

Let x be a web page. Then

- $L(x)$ is the set of Websites that link to x
- $C(y)$ is the out-degree of page y
- α is probability of random jump
- N is the total number of websites

$$PR(x) := \alpha \left(\frac{1}{N} \right) + (1 - \alpha) \sum_{y \in L(x)} \frac{PR(y)}{C_y}$$

```

Thank you for your attention!

Days 1 - 10

Teach yourself variables, constants, arrays, strings, expressions, statements, functions,...

Days 11 - 21

Teach yourself program flow, pointers, references, classes, objects, inheritance, polymorphism, ...

Days 22 - 697

Do a lot of recreational programming. Have fun hacking but remember to learn from your mistakes.

Days 698 - 3648

Interact with other programmers. Work on programming projects together. Learn from them.

Days 3649 - 7781

Teach yourself advanced theoretical physics and formulate a consistent theory of quantum gravity.

Days 7782 - 14611

Teach yourself biochemistry, molecular biology, genetics,...

Day 14611

Use knowledge of biology to make an age-reversing potion.

Day 14611

Use knowledge of physics to build flux capacitor and go back in time to day 21.

Day 21

Replace younger self.

As far as I know, this is the easiest way to "Teach Yourself C++ in 21 Days".
